COMPANY STATEMENT

ADVANCED MATERIAL TECHNOLOGIES

TRUST PTY LTD is a corporation that trades by import and export of most industrial equipment, materials, minerals and metals. We provide services in sales, technical services, engineering services and installation services. Our company has a strong financial foundation, with our network of global partners this allows us to facilitate your needs. We provide door -to-door service on request to satisfy our Customers and distributors requirements. We have established a good working relationship with our Suppliers to provide a standard of high quality, cost effective products. For supply of goods we have a close cooperative relationship with many shipping companies and airlines, so we can provide a quality service for shipping, customs clearance, insurance, and so on. We have storage facilities with good allotment which can meet your needs. Our transit shipments, include the service of checking cargo source, FCL and LCL lots. We can select the appropriate delivery method through our customers and send out goods quickly and safely.

We have a wide selection of products and systems available from our partners throughout the world. We are an Australian partner and agency doing business with many Asian, European and American manufacturing companies, traders and Customers. We strive under the guidance of AMT management policy *"Providing Solutions, Delivering Results"*. We have made remarkable achievements through the persistent efforts of AMT staff. Our professional worldwide network of colleagues are familiar with your business operation and have strong technical capability to find a solution to your problems. Besides providing logistic solutions, we can also develop the market for our overseas customers who seek a source of goods for their Customers. We pride ourselves on our ethics and technical capability to solve application problems for our Customers in all industries!

Our sales and services represent 40 years of working within industry and also includes plant inspections, refractory installation advice on site and quality control of refractory materials through our independent testing facilities.
